

# Shenzhen Zhongjian Nanfang Testing Co., Ltd.

Report No: CCIS15040027502

# FCC REPORT (BLE)

Applicant: Shenzhen Wanchuangbo Industry Development Co., Ltd.

Address of Applicant:

Building 4, Dezhong Industry Park, No.7 Lipu Street,

Bantian, Longgang District Shenzhen, China

### **Equipment Under Test (EUT)**

Product Name: Tablet PC

Model No.: CT1080, CT1080X(X=A-Z), 8050, 8050X(X=A-Z)

Trade mark: iDeaUSA, VENSTAR

**FCC ID**: 2AAGR15M-01

**Applicable standards:** FCC CFR Title 47 Part 15.247

Date of sample receipt: 30 Apr., 2015

**Date of Test:** 30 Apr., 2015 to 21 May., 2015

Date of report issued: 22 May., 2015

Test Result: PASS \*

#### Authorized Signature:

Bruce Zhang Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the CCIS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

<sup>\*</sup> In the configuration tested, the EUT complied with the standards specified above.

# 4 Test Summary

| Test Item                        | Section in CFR 47 | Result |
|----------------------------------|-------------------|--------|
| Antenna requirement              | 15.203/15.247 (c) | Pass   |
| AC Power Line Conducted Emission | 15.207            | Pass   |
| Conducted Peak Output Power      | 15.247 (b)(3)     | Pass   |
| 6dB Emission Bandwidth           | 15.247 (a)(2)     | Pass   |
| Power Spectral Density           | 15.247 (e)        | Pass   |
| Band Edge                        | 15.247(d)         | Pass   |
| Spurious Emission                | 15.205/15.209     | Pass   |

Pass: The EUT complies with the essential requirements in the standard.

| 9                                   | 2420MHz   | 19      | 2440MHz   | 29      | 2460MHz   | 39      | 2480MHz   |

#### Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel             | Frequency |
|---------------------|-----------|
| The lowest channel  | 2402MHz   |
| The middle channel  | 2442MHz   |
| The Highest channel | 2480MHz   |

Report No: CCIS15040027502

#### 5.3 Test environment and mode

| Operating Environment: |                                                         |
|------------------------|---------------------------------------------------------|
| Temperature:           | 24.0 °C                                                 |
| Humidity:              | 54 % RH                                                 |
| Atmospheric Pressure:  | 1010 mbar                                               |
| Test mode:             |                                                         |
| Operation mode         | Keep the EUT in continuous transmitting with modulation |

The sample was placed 0.8m above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

### 5.4 Description of Support Units

N/A

### 5.5 Laboratory Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • FCC - Registration No.: 817957

Shenzhen Zhongjian Nanfang Testing Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in out files. Registration 817957, February 27, 2012.

#### • IC - Registration No.: 10106A-1

The 3m Semi-anechoic chamber of Shenzhen Zhongjian Nanfang Testing Co., Ltd. has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 10106A-1.

#### • CNAS - Registration No.: CNAS L6048

Shenzhen Zhongjian Nanfang Testing Co., Ltd. is accredited to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration laboratories for the competence of testing. The Registration No. is CNAS L6048.

### 6 Test results and Measurement Data

### 6.1 Antenna requirement:

# Standard requirement: FCC Part 15 C Section 15.203 /247(c)

15.203 requirement:

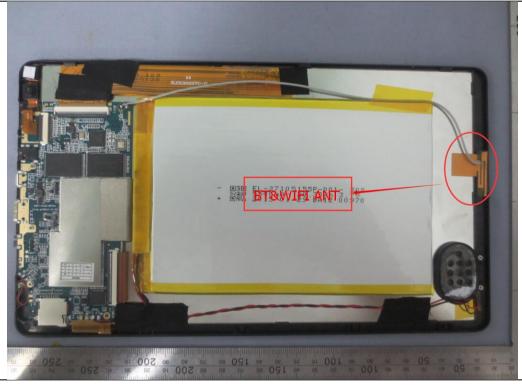

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

#### E.U.T Antenna:

The BLE antenna is an internal antenna which cannot replace by end-user, the best case gain of the antenna is 2.0 dBi.

## 6.2 Conducted Emission

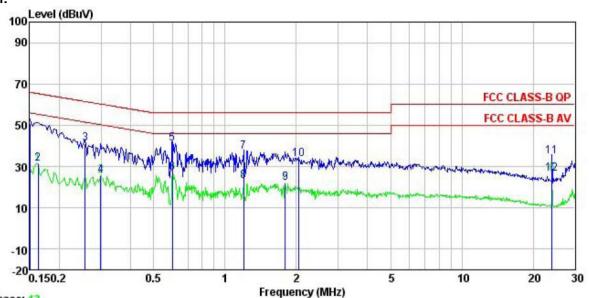

| Test Requirement:     | FCC Part 15 C Section 15.207                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 7                      |                     |  |  |  |

#### Notes:

- 1. An initial pre-scan was performed on the live and neutral lines with peak detector.
- 2. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission.
- 3. Final Level =Receiver Read level + LISN Factor + Cable Loss

# **6.3 Conducted Output Power**

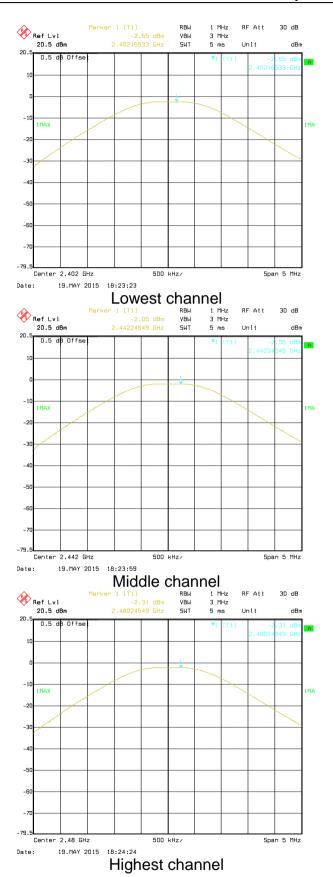

| Test Requirement: | FCC Part 15 C Section 15.247 (b)(3)                                          |  |  |  |  |
|-------------------|------------------------------------------------------------------------------|--|--|--|--|
| Test Method:      | ANSI C63.4:2009 and KDB558074                                                |  |  |  |  |
| Limit:            | 30dBm                                                                        |  |  |  |  |
| Test setup:       | Spectrum Analyzer  E.U.T  Non-Conducted Table  Ground Reference Plane        |  |  |  |  |
| Test Instruments: | Refer to section 5.7 for details                                             |  |  |  |  |
| Test mode:        | Refer to section 5.3 for details                                             |  |  |  |  |
| Test results:     | Passed                                                                       |  |  |  |  |
| Remark:           | Test method refer to KDB558074 v03r01 (DTS Measure Guidance) section 9.2.2.2 |  |  |  |  |

#### Measurement Data

| Test CH | Maximum Conducted Output Power (dBm) | Limit(dBm) | Result |
|---------|--------------------------------------|------------|--------|
| Lowest  | -2.55                                |            |        |
| Middle  | -2.05                                | 30.00      | Pass   |
| Highest | -2.31                                |            |        |

Test plot as follows:

# 6.4 Occupy Bandwidth

| Test Requirement: | FCC Part 15 C Section 15.247 (a)(2)                                   |  |  |  |  |
|-------------------|-----------------------------------------------------------------------|--|--|--|--|
| Test Method:      | ANSI C63.4:2009 and KDB558074                                         |  |  |  |  |
| Limit:            | >500kHz                                                               |  |  |  |  |
| Test setup:       | Spectrum Analyzer  E.U.T  Non-Conducted Table  Ground Reference Plane |  |  |  |  |
| Test Instruments: | Refer to section 5.7 for details                                      |  |  |  |  |
| Test mode:        | Refer to section 5.3 for details                                      |  |  |  |  |
| Test results:     | Passed                                                                |  |  |  |  |

#### Measurement Data

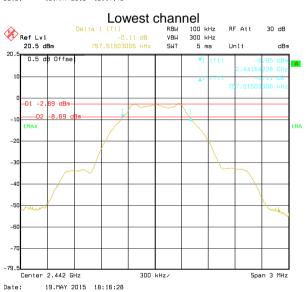

| Test CH | 6dB Emission Bandwidth (MHz) | Limit(kHz) | Result |  |
|---------|------------------------------|------------|--------|--|
| Lowest  | 0.75                         |            |        |  |
| Middle  | 0.76                         | >500       | Pass   |  |
| Highest | 0.76                         |            |        |  |

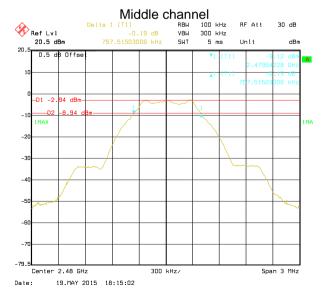

| Test CH | 99% Occupy Bandwidth (MHz) | Limit(kHz) | Result |  |
|---------|----------------------------|------------|--------|--|
| Lowest  | 1.04                       |            |        |  |
| Middle  | 1.04                       | N/A        | N/A    |  |
| Highest | 1.04                       |            |        |  |

| Test Procedure:       | <ol> <li>The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>If the emission level of the EUT in peak mode was 10 dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10 dB margin would be re-tested one by one using peak, quasi-</li> </ol> |                  |                              |             |                                 |

#### Remark:

- 1. Final Level = Receiver Read level + Antenna Factor + Cable Loss Preamplifier Factor
- 2. The emission levels of other frequencies are very lower than the limit and not show in test report.
